

**ABR PACKAGER / ORIGIN**

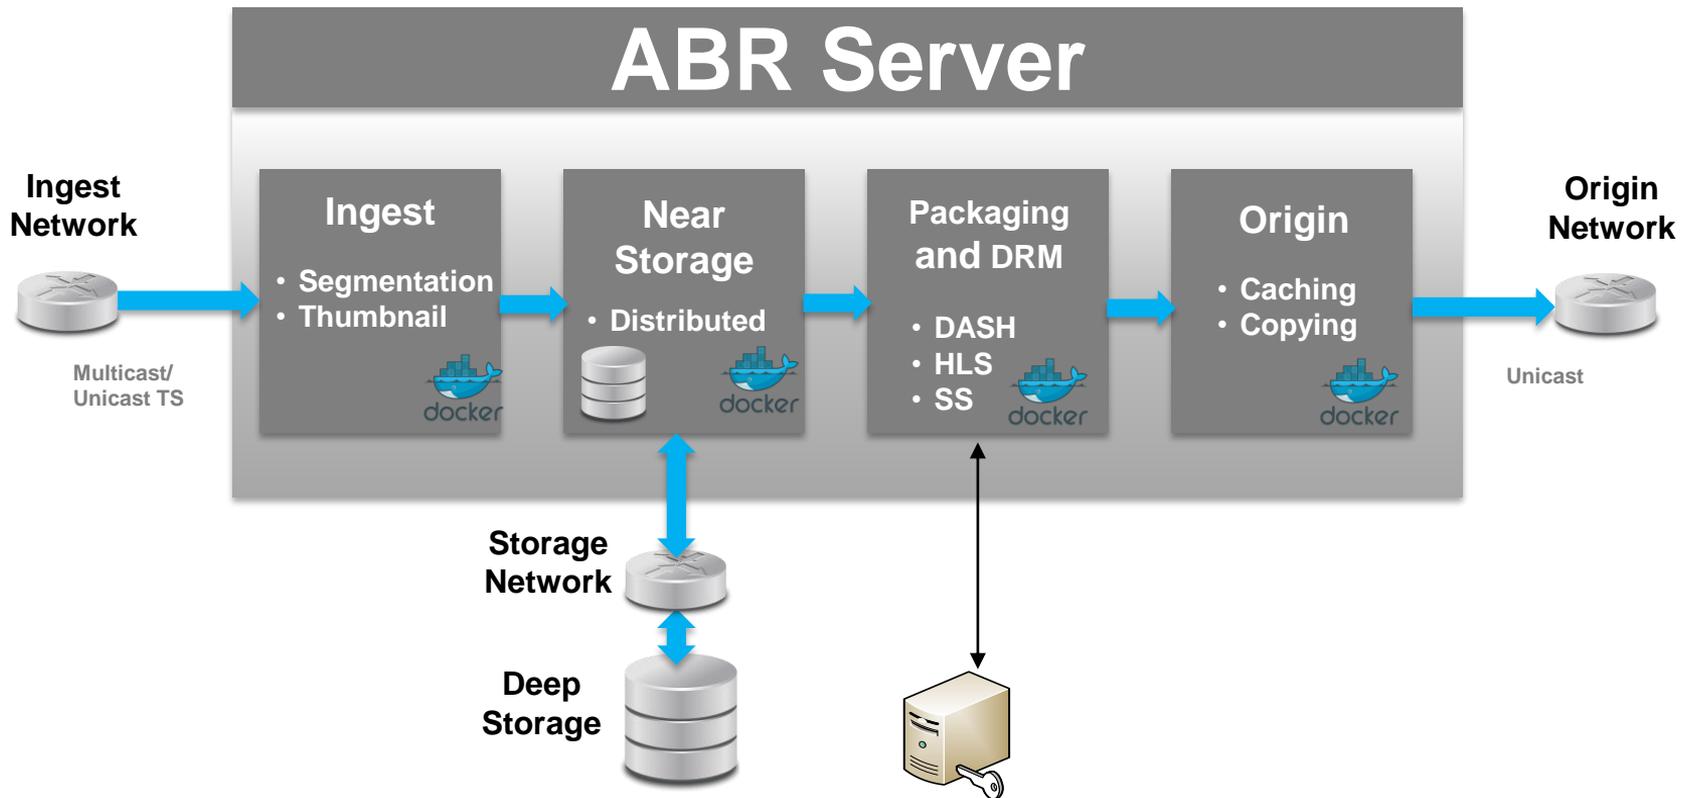

redefining video delivery

# ABR System

- **The ABR server system is designed from the ground up to be highly *scalable***
  - Scalable, distributed system; allowing seamless scaling, brick-by-brick, as needed
  - Deployable as a single server, or as a high availability *cluster*

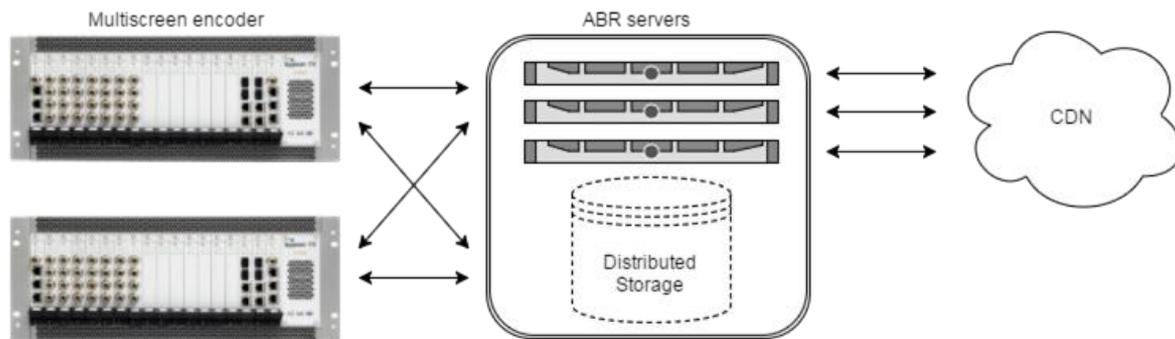

# Data Flow

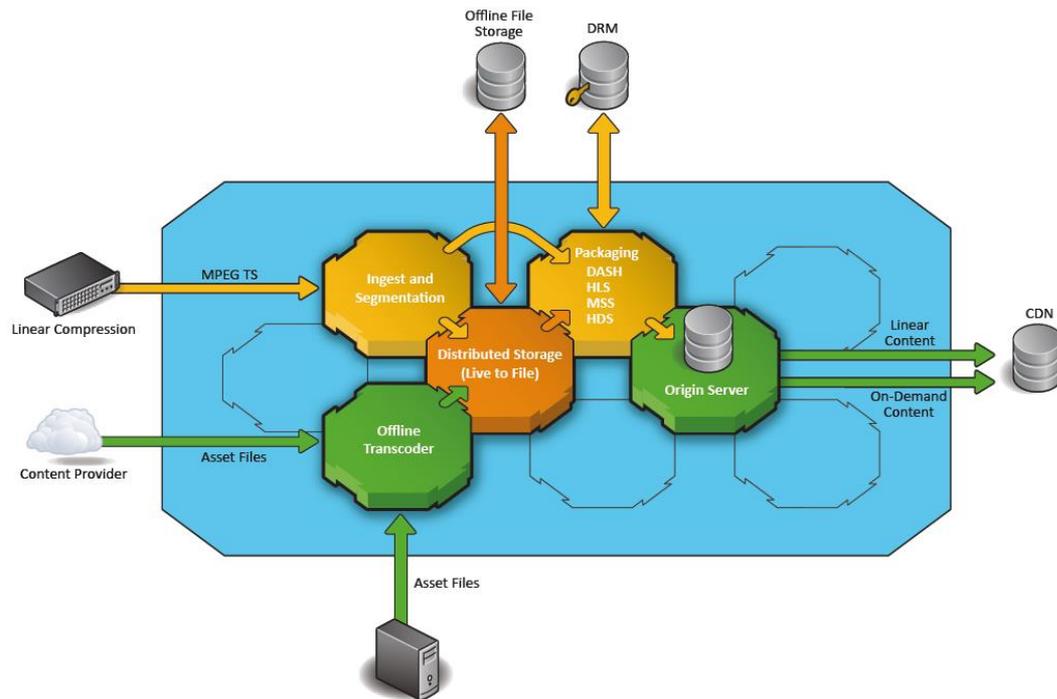

# Redundancy

- **Fault-tolerant architecture with *no single point of failure***
  - *Ingest of each service on two or more servers in the cluster*
  - *Distributed storage with data replication*
    - *A server failure will only reduce the streaming capacity*
  - *Updates can be performed when the system is running without loss of service.*

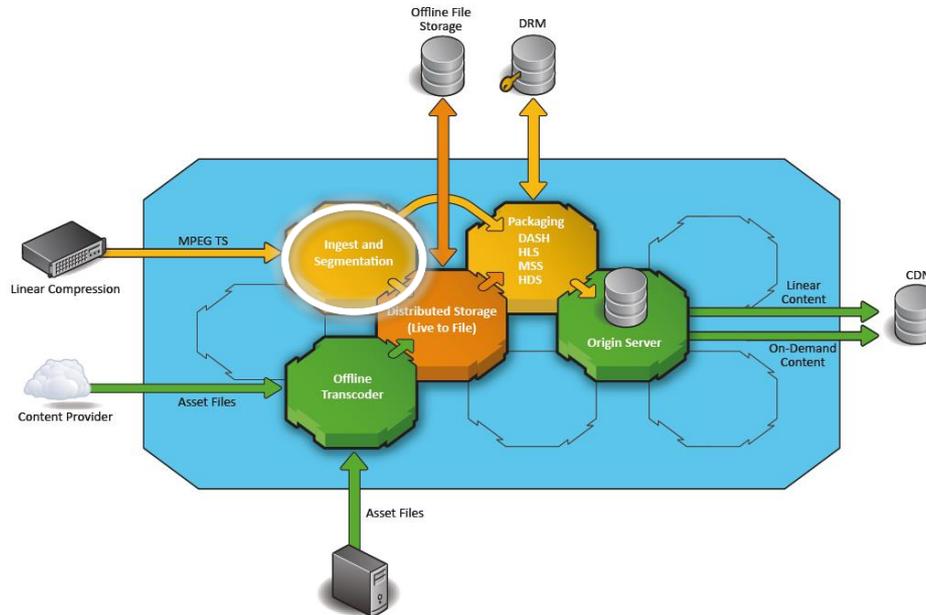

# Just-In-Time (JIT) Packaging

- Capable of serving both Live and VOD
- Supports HLS, HDS, Smooth Streaming and DASH
- Just-in-time / On-the-fly packaging reduces storage requirements

# Input Formats

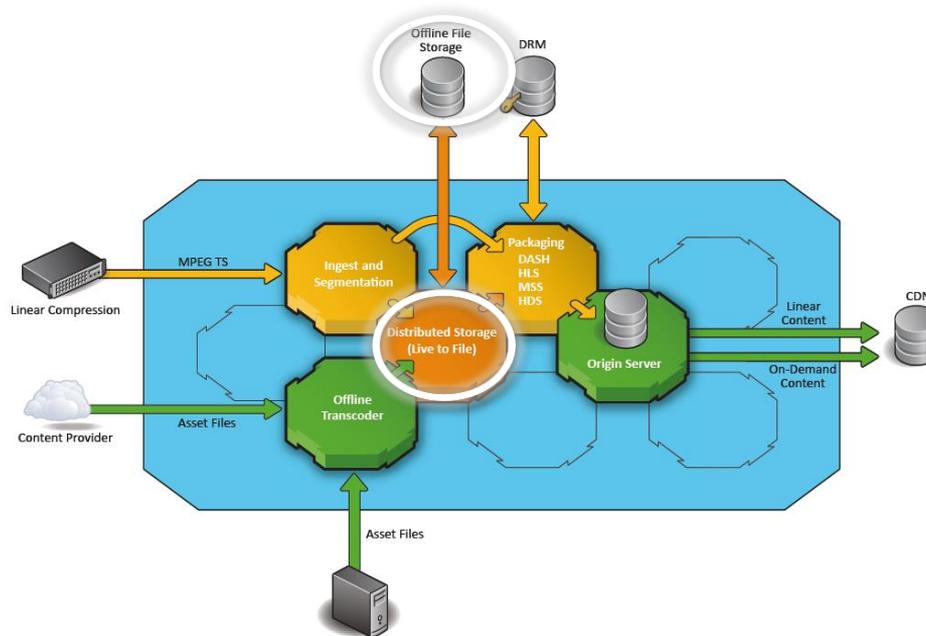

- Unicast/multicast MPEG TS over UDP IP CBR (and VBR) supported
  - Video : MPEG-4 (H.264) and HEVC (H.265)
  - Audio : AAC-LC, HE-AAC v1/2

- **Ingest Capacity:** 100+ services / 1 Gbps per server
- **Redundant Input:** Seamless across servers

# Storage

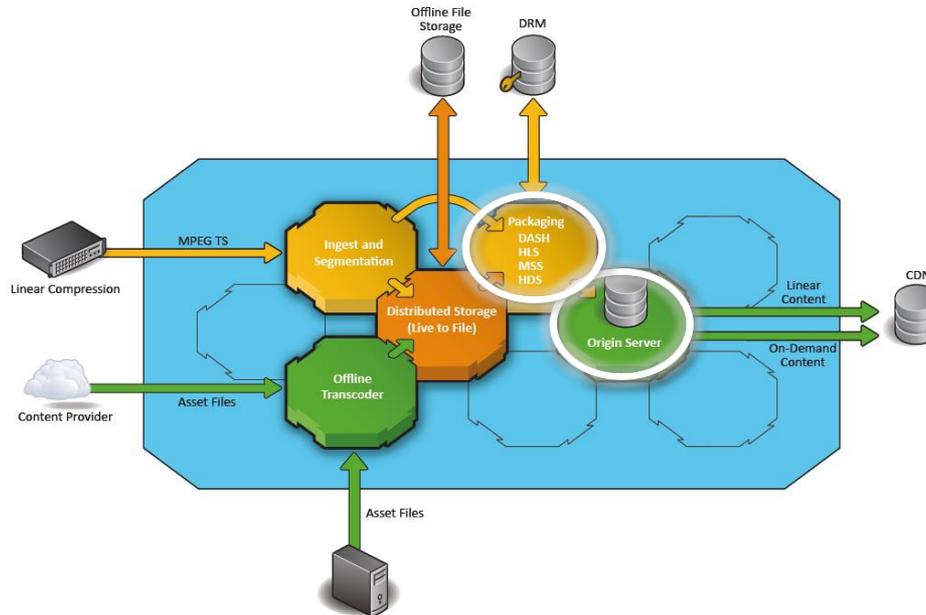

- External storage can be used for
  - Long catch-up
  - NPVR recordings and
  - VOD

- *NFS or ATV AMS*

# Packaging/Origin

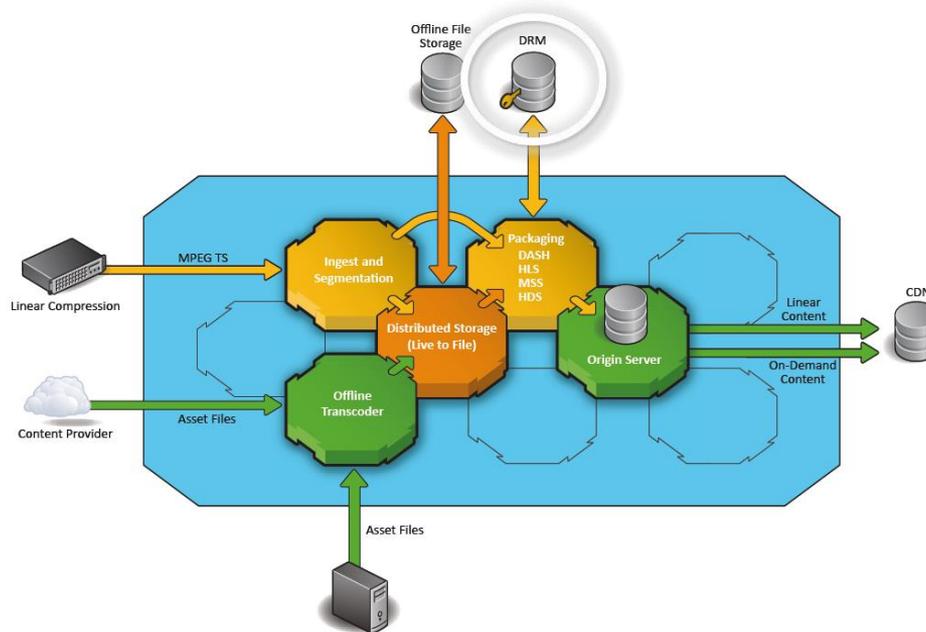

- Streaming capacity
  - Streaming capacity is dependent on many factors, e.g. live vs on-demand streaming ratio
  - CDN/caching, network capacity, delivered format

- **Server capacity**
  - 3-5 Gbps
  - 1500-3000 Clients

# DRM

- Multi-DRM (Microsoft Playready, Apple Fairplay, Google Widevine)
- Integrated with Conax, Verimatrix, DRMToday & Microsoft Azure key servers (additional under integration)
- DASH Clear Key, AES-128, Conax OTT access, Verimatrix Viewright

# Feature List - Input

- *Multicast TS input*
  - *CBR and VBR*
  - *Constant and variable length IDR*
  - *SCTE-35*
  - *Teletext to WebVTT / TTML conversion*
  - *Seamless redundancy*
  - *Interface failover*
  - *Time offset adjustment w/encoder drift tracking*
- *HLS Input coming in next release*

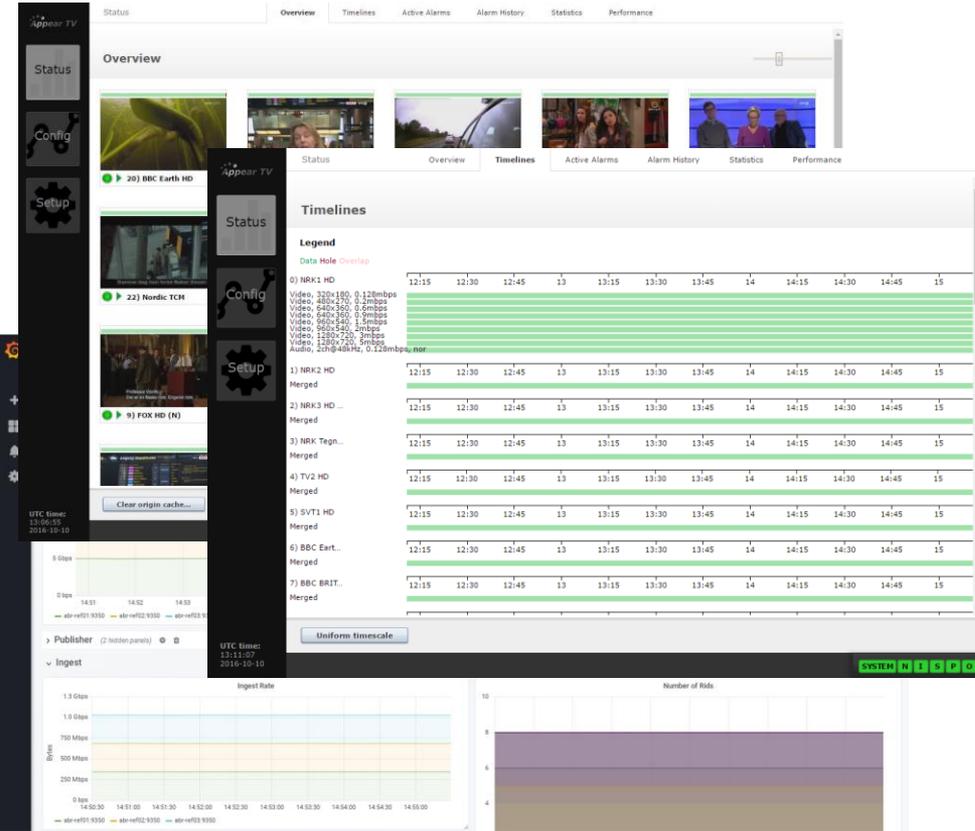

# Feature List - Storage

- *Storage interface:*
  - *NFS, S3 or*
  - *Appear Media Storage (AMS)*
- *Extensive NPVR API's*
  - *Scheduled recordings*
  - *Recordings of recordings*
- *Content and Service level blackouts (API)*
- *“Unlimited” catch-up archiving to external storage*
- *VOD*
  - *Directly through Appear TV offline encoder solution*
  - *API for uploading pre-encoded content*
  - *Full set of APIs for creating/managing assets*

# Feature List - Output

- *DASH, HLS, HSS (and HDS)*
- *Adjustable manifest segment lengths*
- *Comprehensive manifest control parameters*
- *CENC Multi-DRM for DASH*
- *Widevine, Playready, Fairplay encryption*
- *SCTE35 event signalling (DASH and HLS)*
- *Thumbnails and I-frame only playlists (HLS)*
- *Services from stitched assets*
- *Content and service level blackouts (API)*
- *“Hole” filling to cover source/ingest issues*
- *Basic firewall and access lists*
- *Application for MP4 export (non-fragmented)*
- *+ Much more*

# Current Focus - Next release

- *HLS ingest*
  - *Integration against ABR SW enc.*
- *Improved database redundancy*
  - *Management failover*
- *Prometheus instrumentation*
  - *Built-in metric end-point*
  - *Simplifies operations monitoring*
- *ABR Media Storage (AMS)*
  - *Deep storage option*
  - *Performance optimized for video*

# THANK YOU!
