

AVP 3000 Voyager Configuration Packs

The AVP 3000 Voyager is the latest generation of the market leading Voyager product for live news, sports and entertainment, capable of multi-codec, multi-format and multi-channel operation. It is the most flexible and scalable news gathering system on the market, reflecting MediaKind's technology leadership and unique heritage in this segment.

The AVP 3000 Voyager excels in providing maximum flexibility, performance and interoperability while delivering best return on investment to operators and service providers through the widest range of software upgrade paths and expansion options. To make it simpler to select the most popular options, a set of five AVP 3000 configuration packs are now available at very attractive fixed prices.

The configuration packs provide a hierarchy of functionality starting with the HD DSNG, moving to Events and finally World Events pack.

Recent enhancements include the addition of an ASI I/O module to all packs, dual AC PSU for the top two packs and DVB-S2X support in the World Events pack.

It is possible to order an AVP 3000 with the specific combination of software and hardware options that you require. Also any hardware or software upgrades can be added once the unit has been delivered, refer to the AVP 3000 data sheet for details.

Product Overview

The most flexible integrated DSNG

Based on two decades of encoder design experience, and a series of SNG firsts the AVP 3000 Voyager is a future proof modular platform capable of multi-codec, multi-format and multi-channel operation. It now supports DVB-CID and DVB-S2X.

Highest compression performance

The AVP 3000 uses MediaKind's in house video encoding algorithms and deliver best in class video compression performance from very low bit rate to high bit-rate operation.

Multi-output

The AVP 3000 provides an L-Band or IF satellite output, as well as two IP output ports. It can be upgraded to provide ASI output or G.703 output.

Multi-codec

The AVP 3000 can provide MPEG-2, MPEG-4 AVC or even JPEG 2000* encoding, 4:2:0 8 bit or 4:2:2 10 bit, SD or HD, even UHDTV is possible (using two AVP units).

*JPEG 2000 encoding requires the addition of a CE-aJ2K encoding module.

Easy to operate

The AVP 3000 provides a web user interface that has been designed in consultation with our customers to provide a clear, simple and intuitive for the SNG operator. It can also be controlled via a fully functional front panel, which includes a high resolution display for video confidence monitoring.

Reassurance of World Wide Support

MediaKind can provide 24/7 global support.
